“The Solar System”

In our solar system there are eight planets which circle around the sun. The circular paths that they make around the sun are called orbits. All eight planets move around the sun in the same direction – anti – clockwise.

There are two parts to the solar system:

- The inner solar system contains the planets Mercury, Venus, Earth and Mars. These planets are terrestrial, which means they are made of rock.
- The outer solar system contains the planets Jupiter, Saturn, Uranus and Neptune. These planets are gaseous, which means they are made of gas.

An asteroid belt separates the inner planets and the outer planets.
